Barium	5590773
Reducing X-radiation use	44009173

In the above tests, except for the first three, add 206 to any rate for testing actual fall-out absorption in the human body - example - 30936206. For testing contamination of foods, however, add 347. For testing contamination of milk, or milk foods, add 908. ONE exception to the rule is for testing inert substances, such as furniture, bedding, walls, and clothing contamination. The figure 73 should be added IN FRONT of the rate - example - Uranium 235, rate 8349009, when testing inert substances use it 73-8349009.

### HOMOEOPATHIC

The lists of homœopathically prepared remedies and nosodes given hereunder are given for the following uses: 1st. for the selection of suitable medicines for any condition or patient, in order that the exact remedy/ies can be given, or selected in the shortest possible time. 2nd. since the rates given are representative of each remedy, the rate can be BROADCAST if desired instead of using the actual remedy. It might be found that some remedy rates are similar to rates of illnesses (q.v.) in which cases a reference to the Materia Medica will at once link up their use. It will be appreciated that the list is representative of the some 3,000 possible homœopathic remedies, and the one rate given is the most used potency or the most repetitive by research. The list given is prepared from Boericke's Pocket Materia Medica and other research works on the subject. Wherever room permits the COMMON names as well as LATIN names will be given.

Depending on your further study of the aura, you will find that by seeing the aura or by using these rates one might be in a position to cross check illness or mental illness, the rates given here can also be used for Aura treatment, but, ON NO ACCOUNT must the Compensating rates of the Aura be used, since we do not know what effect these might have on so delicate a radiation.

DIET SELECTION : These diet sets are as complete as possible. The number 201 should be added to all diet rates, thus :- Rice 2011839, or Buttermilk 201790, we mention this here in order to save repetition in the set.

#### NOTES :

It is possible when making a diagnosis of a named illness, condition, or disease to find that the actual condition is not at that time pathologically apparent, as in the case of Influenza or the common cold, it is possible to get a reading of any virus complaint during the very first stages of incubation, but by detecting it early, preventative measures can be taken.

It is also possible to trace the "age" of the disease, thus getting at a possible cause, by mental orientation of the various ages of the subject under test, a positive reaction is obtained at the desired time. We should also remember that the principle causes of disease can be any of the following :-

Shock - even in early life can affect the subject up to, and including old age.

Accident - the psychological results of accidents are not apparent for many days, months or years after the accident, depending on whether or not a prophylactic was given at the time for shock.

Childish jealousy, brought into later life can be the cause of much illness, if it is used as resentful attitude in later life.

Wrong dieting is a prime cause of disease, and attention should be given to it in all cases.

Living conditions can affect the system in the form of psychosomatic illness, it is no use trying to cure a condition brought about by psychological upheavals, UNLESS that cause is amended.

These are just a few pointers that might come in useful for the practitioner.
